Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1870 Excerpt: .series can then be formed. This was the case with our nebulous sun. 10. If in any nebulous globe rotation begins with a thin layer on the exterior, and if the globe be not greatly expanded, then retardation will be great and the distance for contraction will be small. Therefore a velocity of rotation may never be attained so great that the centrifugal may equal the centripetal force. From such nebulous globes no equatorial rings can be separated; and such formerly were Mars, Venus, and Mercury. They abandoned no nebulous rings which might subside into satellites. 11. If the initial velocity be not merely in an external layer, but a general movement through the entire globe, and if the globe be Terv greatly expanded, then all the matter of the globe may be wparated in a disk-like succession of rings. 12. Between these two extremes, there may he an infinite number of intermediate grades; none of the matter may be separated, or a small part may be separated; then larger and larger portions may be separated; until finally all the matter of the globe may be spread out in a disk-like succession of rings. 13. By continued contraction all the rings must break up into separate nebulous clouds, in the same manner and for the same reason as did the nebulous matter originally diffused through all space. Here we contemplate two successive sets of nebulous clouds. We may call the first in the order of time...
